

SECURE MAIL

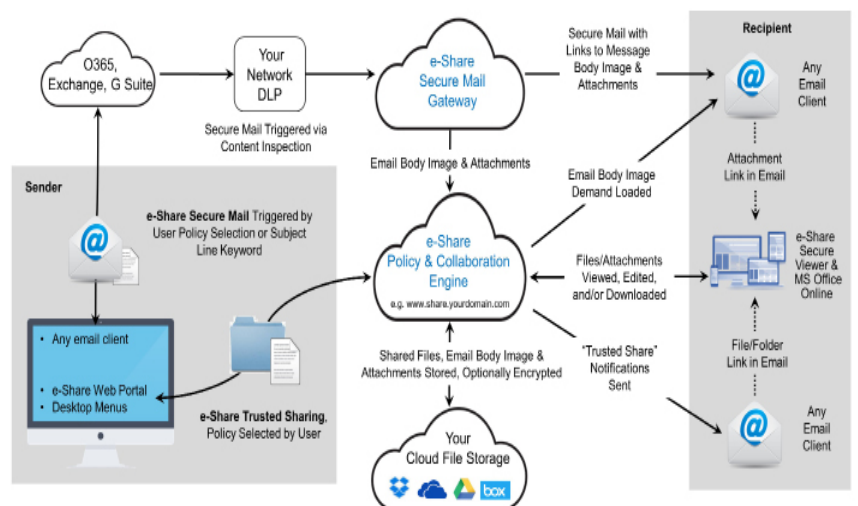

BENEFITS

- **Familiar Email-based Workflows** - Simple, secure email and messaging capabilities that don't require users to change behaviors or to learn new systems.
- **Information Control** - Easily manage and dictate how information is shared, with who and what actions can be taken without plug-ins or passwords.
- **Branded & Trusted Communications** - Give your collaborators confidence with clearly branded emails, URLs and web interfaces.
- **Platform & Tools Consolidation** - Centralize collaboration on one platform and eliminate disparate collaboration, secure email and add-on chat tools that may surprise and confuse users.
- **Fewer demands upon IT** - Users can self-serve in meeting their collaboration needs
- **Easy Adoption** - Integration with your mail system allows secure collaboration to occur naturally, with little training and virtually no IT support

The ability to share information externally is required in today's digital economy. And email is more ubiquitous than ever. But is it sufficiently secure for transferring sensitive, proprietary, regulated data outside the firewall with external parties like legal teams, supply chain partners, third-party vendors - even customers?

Or are you worried your collaborations with them may end up [posted on message boards, for everyone to see?](#)

e-Share **Secure Mail** is a light-weight collaboration product that leverages your investments in cloud storage platforms and email-based workflows to make information delivery and management easy, reliable and secure. It's the first platform that gives you confidence and security, keeps everything compliant, and users actually love.

USE CASES

- Secure Email (e.g. notices to clients, legal contracts)
- Data sharing with supply chain (e.g. security contractors, parts suppliers)
- Cross-domain data sharing (e.g. secret to unclassified networks)
- Exchange of ITAR controlled data with sub-contractors
- Replace disparate and insecure collaboration infrastructure
- Sensitive disclosures to regulators

EASY

e-Share **Secure Mail** makes sharing information externally simple and secure. No software downloads or lengthy registration process is required. It works how recipients want to work, with the tools they already use.

- **No Passwords to Manage** – The use of SmartURLs makes it simple for recipients to receive, view, comment, edit and even message with other document editors without the need to register for an account or remember a password.
- **Integrated Secure Mail & Messaging** – e-Share **Secure Mail** seamlessly integrates with O365 and Gmail. Using our Secure Conversations feature allows sender & recipients to collaborate in real-time around shared files/folders and relevant messages - increasing the productivity and confidentiality of the whole exchange.
- **On-Demand Virtual Data Rooms** – Each conversation automatically creates a private virtual data room for senders and recipients, enabling them to collaborate in real-time - without IT involvement.
- **Rapid adoption** – With an interface and features that mimic cloud storage providers and with nothing to install, deployment and adoption of e-Share across the enterprise requires very little end user training. Integrating **Secure Mail** with existing network DLP solutions gives organizations extended control over email attachments.

RELIABLE

e-Share **Secure Mail** enables customers to use their trusted domain name and branding to share and collaborate with external partners, ensuring links are never blocked and the data being shared is authentic and trustworthy.

- **Private Branding** – e-Share allows you to present a private collaboration service to your team, clients, vendors and partners, using your logo, colors, terms of use, etc. Private branding strengthens your brand and instills confidence and trust on the part of those you are collaborating with.
- **Confirmed Email Delivery** – Since e-Share routes your custom branded and formatted secure emails through your mail service (Exchange, Office 365, G-Suite, etc.) sender organization information is easily verified by recipient spam filters and email security gateways by verifying SPF and DKIM signatures. This greatly increases the reliability of email delivery to recipients. No more looking for emails in Spam or Junk mail folders.

SECURE

e-Share **Secure Mail** provides an advanced layer of information management and encryption capabilities that deliver fine-grained access, tracking, compliance and privacy controls.

- **Attachment Management with No Plug-ins** – e-Share is a browser-based collaboration system, with access expiration, view only access and online editing and co-authoring that requires no plug-ins to install or software to download.
- **Control & Track Every Action** – With e-Share Secure Mail you get the widest range of sharing controls such as view only, online editing and more, are tracked in compliance with today's privacy and security regulations.
- **You Hold the Key** – Unlike other cloud file storage services, e-Share's encryption system prevents e-Share and the underlying cloud file storage provider from accessing any data.
